

2017 Calgary Energy Roundtable
Wednesday, October 11th, Calgary Hyatt Regency

- MC: **Jason Langrish**, President, The Energy Roundtable
- 7:30 am Registration. A continental breakfast will be available
- 8:00 am Welcome from **Monica Rovers**, Head of Business Development, Global Energy, TMX Group
- 8:10 am **Session 1: The future for Canadian oil**
A recovery in energy prices and drop in costs are offering relief to Canadian producers who have struggled over the past few years. During this time, a wave of M&A activity was predicted, but failed to materialize and some major players departed the oil sands. Companies retrenched and aggressively cut costs. Yet OPEC's price war to drive out North American producers has in fact made many far tougher competitors through efficiency gains and a transition to long life, low decline assets. M&A activity picked up and the oil sands have 'Canadianized', as several of the majors decide they no longer wish to be owner / operators of these assets. Market access has also received a boost, with approvals for the Trans Mountain and Keystone XL pipelines. Coming out of one of the worst slumps in modern history, what lessons can we draw from the past two years? The panel will examine the future for Canadian oil and offer perspectives on how companies can best position themselves.
- **Adam Waterous**, Founder, Waterous Energy
 - **Ian Anderson**, President, Kinder Morgan Canada
 - **Steve Reynish**, Executive Vice President, Strategy & Corporate Development, Suncor
 - **Sheng Ding**, Senior MD, HOPU Investments and Chairman at PetroBroad Ltd.
- Moderator: **Mungo Hardwicke-Brown**, Partner, Blake, Cassels & Graydon LLP
- 9:15 am **Speaker tbc**
- 9:45 am Networking break
- 10:15 am A discussion on the US versus Canadian strategic approach to developing energy resources with:
- **Bill Marko**, Managing Director, Jefferies LLP (Houston)
 - **David Hill**, Executive Vice President, Exploration and Business Development, Encana
- 11:00 am **Session 2: The outlook for Canadian natural gas**
Canadian gas producers require new sources of demand for 300-500 years' worth of product. Exports to the US continue to decline, and while Canadian gas can serve major markets in the east by using existing infrastructure, it is competing against growing supplies from the eastern U.S. Significant LNG export opportunities exist on both coasts. However, US LNG is outpacing Canada, including in the battle for market share in East Asia, where the Canadian advantage is a potentially lower cost of delivery and a 'greener' product. Panelists will discuss if Canada can realize its potential and develop a robust ecosystem for producing, using and exporting natural gas.
- **Brian Tuffs**, Chief Executive Officer, Sinopec Canada
 - **Andy Calitz**, Chief Executive Officer, LNG Canada
 - **Bo Xue**, Vice President, Commercial, Guangdong Dapeng LNG Company
 - **Mark Fitzgerald**, President & CEO, Progress Energy
- Moderator: **Mary Hemmingsen**, KPMG Alumni and previous KPMG Global Head of LNG

12:00 pm Lunch with address (at 1:00 pm) by **Dawn Farrell**, President & CEO, TransAlta

1:30 pm **Session 3: More for less: are project outcomes and technology where they should be?**

Energy producers have contained costs and focused on the most profitable ventures. To remain reliable suppliers of energy, Canadian oil and gas companies need to be at the forefront of change with progressive thinking and the integration of serial innovation and sustainability at the core of their strategies. Canada's oil and gas industry must navigate this transition by leveraging its expertise and highly skilled workforce, accelerating technological innovation, speeding up commercialization, restructuring systems and operations for sustained productivity, and innovating pro-actively across the board. The panel will discuss how industry is reinventing itself to emerge as a global energy leader.

- **Neil Camarta**, President & CEO, Field Upgrading
- **Chris Vertanness**, Vice President and Project Director, Fluor
- **Elizabeth Sanborn**, Chief Operating Officer, Independent Project Analysis
- **Repsol** – speaker tbc

Moderator: **IBM** – speaker tbc

2:30 pm Break

2:45 pm **Session 4: What does carbon pricing mean for the energy sector?**

The Canadian federal government's Pan-Canadian Framework on Clean Growth and Climate Change will establish a baseline carbon price of \$50 a tonne by 2022. A phase-out of coal by 2030 is a key component of the Alberta government's ambitious climate change plan, which also includes a broad-based carbon levy and an emissions cap on oil sands production. Alberta and Saskatchewan are the Canadian frontier for the renewable energy industry – up to 7000 MW of new supply over the next 15 years. Carbon pricing is set to become a potentially divisive election issue in Alberta. As Donald Trump intends to reverse Obama's climate change legacy, will the Canadian oil and gas sector be at a competitive disadvantage or will Canada's carbon regime instill confidence in investors that are sceptical about companies with a large carbon footprint? The session will explore the impact of a lower carbon environment on both traditional and clean tech energy and the strategies that can be deployed, including the latest innovations in energy management processes and technologies.

- **Tracey Stoddard**, Vice President, Development, ACCIONA Energy North America
- **Gordon Murray***, Executive Director, Wood Pellet Association of Canada
- **James Ross**, Chief Executive Officer, Expander Energy
- **Joy Romero***, Vice President, Technology & Innovation, Canadian Natural Resources Ltd.
- **Sara Hastings-Simons***, Programme Director, Clean Economy, Pembina Institute

Moderator: **Caroline Saunders**, UK Consul General, Calgary

3:45 pm Close
